

AASHTOWare Project FieldManager™

Enterprise-Wide Construction Management

Increasing demands and higher accountability in the road construction industry require an enterprise-wide solution that offers seamless integration, ease of use and reliable support. Designed and built for users by users, the AASHTOWare Project FieldManager™ software provides a stable and scalable software solution to manage your construction projects.

Using field-proven methodologies, AASHTOWare Project FieldManager reduces common errors and organizes vast amounts of construction project data with pinpoint accuracy, streamlining the construction management process and adding clarity to all levels of communication.

AASHTOWare Project FieldManager, along with its companion products—AASHTOWare Project FieldManager Read-Only, AASHTOWare Project FieldBook™, AASHTOWare Project FieldBuilder™ and AASHTOWare Project FieldNet™—works for you by offering single-point data entry, comprehensive reporting tools and customizable agency options to fit your exact needs. AASHTOWare Project FieldManager also interfaces with AASHTOWare Project Contract Administration™ for contract creation.

AASHTOWare Project FieldManager acts as the main repository for your construction contracts, tracking everything from pay estimates and contract modifications to material usage and daily reports. AASHTOWare Project FieldManager Read-Only provides anyone involved in the construction cycle, from executives to contractors, access to project data for reference and review. For field data collection, AASHTOWare Project FieldBook works on-site with the inspectors, providing them with critical contract data and a means to accurately capture site conditions, item usage, field personnel and equipment, and much more. AASHTOWare Project FieldBuilder allows organizations to independently create tailored reference lists and projects outside the boundaries of other agencies or governing authorities. Simplify data transfers and authorizations with AASHTOWare Project FieldNet, a secure and dependable communications network that eliminates file handling problems associated with e-mail or external media. All requests are logged and authorizations for pay estimates and change orders can be done in a flash.

AASHTOWare Project FieldManager's reporting tools also enhance its flexibility. Not only can you access over 60 built-in, standard reports and inquiries, but you also can use any ODBC compliant query tool

to generate customized reports. It is also fully configurable. The program lets you decide how to handle certain situations, like quantity overrun payments, stockpiles, material cost percentages and time charge increments, based on your specific business practices.

AASHTOWare Project FieldManager has no practical limit to the number or size of the contracts it can manage. For example, one agency currently manages a \$150,000 contract with AASHTOWare Project FieldManager, while another is managing over 80 contracts worth \$1.5 billion. With login security and revision tracking, AASHTOWare Project FieldManager keeps audit trails on every action related to contractor payments. In addition, sorting and filtering on different criteria enable you to locate specific information quickly. For example, researching site conditions for an accident that occurred three years ago takes seconds, rather than hours spent sifting through paperwork. AASHTOWare Project FieldManager records data only once and then transfers it to necessary locations, thus eliminating the need to write down information multiple times and preventing common data entry errors. Extensive edits and warnings are built into the system to ensure that fields are filled in correctly, with minimal effort, and to provide a high degree of protection from user error.

Implement AASHTOWare Project FieldManager and begin experiencing the many benefits of the system:

- significant time and cost savings
- substantial reduction in paperwork
- more timely project completions
- better organized projects
- faster generation of pay estimates
- increased flexibility and accuracy
- faster decision making
- improved customer response time
- increased access to contract information
